

Ortyn and The Aliens

The Planetary Diet

This new book we've just written might well incite a riot
When we explain the simple truth so no one can deny it
If you don't like how much you weigh... your weight we'll help you change
You're just a rocket ride away... the details we'll arrange

*We'll take you to another world where all the stars shine brighter
You'll be amazed by what you'll weigh... we promise you'll be lighter
It's not enough to just believe... you really ought to try it
To start you'll need to read our book... "The Planetary Diet"*

We could fly up to Pluto... so far out in the heavens
Your hundred pounds of weight on Earth on Pluto's not quite seven
We'd surely fry on Mercury but Mars gives equal weight
Your same one hundred pounds up there weighs under thirty-eight

We'll race through space to Venus though Saturn's even funner
Each place we go you'll need to know you'll be a ninety-oner
Avoid Neptune and Jupiter... they'll make your numbers soar
Don't set your feet upon these two or you'll be weighing more*

*We'll take you to another world where all the stars shine brighter
You'll be amazed by what you'll weigh... we promise you'll be lighter
It's not enough to just believe... you really ought to try it
To start you'll need to read our book... "The Planetary Diet"*

We'll touch down on Uranus...there you'll still feel much finer
'Cause you'll not fail to tip their scale at less than eighty-niner
Should all these planets seem too far to travel for our scheme
Then we'll just zoom up to the Moon where you'll weigh seventeen

*We'll take you to another world where all the stars shine brighter
You'll be amazed by what you'll weigh... we promise you'll be lighter
It's not enough to just believe... you really ought to try it
To start you'll need to read our book... "The Planetary Diet"*

* 100 pounds on Earth = 113 pounds on Neptune or 236 pounds on Jupiter
